DEANTE WATER FILTER		

Triple water filtration

The filtration is based on three advanced technologies that together effectively eliminate water impurities.

They remove chlorine, pesticides, and sand while improving the taste of water.

It effectively reduces the presence of heavy metals and prevents the growth of bacteria, providing clean and safe water for daily use.

Water flow monitoring

The display is a practical device for monitoring water flow, which primarily alerts you when the filter cartridge reaches the end of its lifespan – after 11,000 liters or 6 months.

This way, you always know when to replace the filter to keep the water clean. It is also easy to install and operates on low voltage 3 V DC, making it energy-efficient and convenient to use.

The water filtration set effectively removes impurities such as chlorine, heavy metals, and sand, improving both water quality and taste. It features a convenient monitor that indicates when the filter needs to be replaced, helping to maintain high water quality every day.

The product is easy to install and is designed for use with Deante brand faucets that have a water filter connection.

DEANTE WATER FILTER		

The replacement filter for the water filtration set (BFF_XZFP) should be replaced every six months or after filtering 11,000 liters of water.

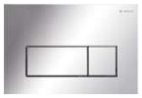

The product is easy to install, allowing for quick and convenient maintenance of high-quality filtered water every day, while also ensuring the health and comfort of its users.
